

Morpho - Bug #1712

Radio buttons for choice are "all" set as default in Tree Editor

10/08/2004 08:40 AM - Mark Servilla

Bugzilla-Id:	1712		
Description			
<p>When creating a new instance document, the Tree Editor sets all radio buttons as the default. If the document is saved without deselecting all but the desired radio button ("schema choice"), all choice elements are saved - which, results in an invalid EML document.</p> <p>Note that this behavior is not verified for all choice sections within the Tree Editor.</p>

Mark, I am not able to figure out a way to reproduce the bug. Can you please add steps to the bug report on how to reproduce the bug. Thanks.

To find this bug, open a package in the tree editor and then click on the "Show All" button. Then look for nodes named "(CHOICE)"

For example, find a dataset with attributes under the dataTable element (e.g. the jscientist datapackage). There is a (CHOICE) node under the attributeList element that is all selected radio buttons when the Show All button has been clicked. These should NOT be radio buttons to begin with, and if they were, only one should be selected.

Another example - The 'constaint' element follows 'attributeList'. It has a (CHOICE) subelement which has a series of radio button elements, all of which are selected.
