Description

Port names can be quite informative (in particular when chosen carefully ;-) and help understand a workflow. The display of portnames seems to be a local property of actor ports now. I would like to suggest a global switch to turn on/off the display of all portnames. The following would probably be good global options:

- turn ON GLOBAL port name display (overriding local settings)
- turn OFF GLOBAL port name display (overriding local settings)
- turn ON LOCAL port name display (as provided by the local settings)

you should be able rt click an actor and select "show port names". there should also be a menu item in the top level menu that says "show port names" and turns port names on/off for all actors.
