Bugzilla-Id:	1771		
Description			
In the top portion of the taxonomic coverage screen in the DPW, if you add a few rows of information, and then delete the bottom row, the other rows become unselectable, and the DELETE and EDIT buttons disappear.			
This bug was discovered by Veronique.			

History

This seems to occur anytime the last row of information is deleted after another row has been added or deleted. I get similar behavior when trying to delete keywords from a keywordSet. When this occurs in the taxonomicCoverage area, the OK button also fails to work, preventing the saving of any changes.

The std.err log gives:

```
Exception in thread "AWT-EventQueue-0" java.lang.ArrayIndexOutOfBoundsException: 16 >= 16

i'll take a look at this

#3 - 01/22/2010 11:45 AM - ben leinfelder

now checking for out of range
