<b>Description</b> There is currently no solution in place to address the challenge of documenting data sets which may change over time. Once a data package is created and data are added to it, it is a static snapshot of that data at that time, and there aren't any adequate means for ensuring that changes to the data set will be reflected in the version we have in metacat. One thing I am doing right now if I add data to a data package is to put "The data were added to this data package on MM/DD/YYYY. Refer to the online distribution location URL for the most up to date versions, as this data may change over time." (or something similar) in the metadata. However, this isn't that great of a solution.
