Bugzilla-Id:	1786		
Description			
One drawback in using Morpho to look at a dp versus the web is that when you add an excel file of data to a data package, you can download that file when you are looking at a data package on the web and see the data, but in Morpho, you cannot see the data (because excel data is not displayed in Morpho), and there is no way to download the file through Morpho. Even if Morpho cannot read and display data in excel, there should be a way to download the data file.
