

Morpho - Bug #1805

Force quit of one Morpho window closes other windows

Description

When force quitting (Ctrl-Alt-Del) the Morpho help, or a data package, other Morpho windows also close, including any open search results windows, and sometimes the main Morpho window. It would be nice to have the one window you want to be closed close, and have these other windows stay open, so as not to have to re-open Morpho and repeat searches, etc.

History

#1 - 12/03/2004 11:07 AM - Matt Jones

Force-quitting is not a legitimate user-action under normal circumstances -- it is only intended to allow someone to terminate an entire application if a fatal error occurs. So I think it is doing exactly what it is supposed to do -- terminating all morpho processes. If you simply use the close box on the window it should close without affecting any other parts of Morpho. Why are you using force-quit?

#2 - 12/03/2004 12:40 PM - Andrea Andrea

Force quit is necessary when a data package window freezes (which occurs occasionally), and the close box doesn't respond.

#3 - 12/03/2004 01:01 PM - Matt Jones

That sounds like a significant problem. Is there a bug detailing the freeze problem? We need details to find and fix bugs like that. If we can replicate the freeze problem then we'll definitely prioritize fixing it. But we still can't do anything about the force-quit feature -- it is part of the OS, not part of Morpho or any other application.

#4 - 12/15/2004 04:45 PM - Andrea Andrea

The freeze problem is not reproducible as of yet.

#5 - 06/30/2010 02:37 PM - ben leinfelder

no force quit for individual windows - and the freezing is non-specific in this (old) bug report.
