

Morpho - Bug #1833

morpho should support eml-2.0.1

12/15/2004 01:40 PM - Matt Jones

Description

Morpho 1.5.1 produces eml-2.0.0 documents. It also only searches for eml-2.0.0 documents and prior. We need to make it easy for morpho to support new versions of eml, especially versions that are backwards compatible with earlier eml versions. This might involve creating a jar download of the EML schemas and stylesheets and a config file telling morpho how to handle crucial aspects of the eml (maybe not needed). If this jar file can be downloaded by morpho then we could upgrade existing morpho installations without the user having to get a new version of the software. At a minimum we need a new release of Morpho that creates and searches both EML2.0.0 and EML 2.0.1 documents.

This bug is almost fixed. Things that had to be done to fix this bug:

1. Morpho creates eml-2.0.1 documents
2. Tree editor is able to handle both eml-2.0.1 and eml-2.0.0 documents
3. Data package wizard screens could be accessed from documentation menu for both eml-2.0.1 and eml-2.0.0 documents. hence dpw should be able to handle both eml-2.0.0 and eml-2.0.1
4. Similarly, Data import Wizard should also be accessed from the menu. In addition, this wizard will be called for eml-2.0.0 documents when someone tries to import data into an eml-2.0.0 document. Hence it should be able to handle both the schemas.

1 and 2 are done.

3 is not a problem yet because I havnt seen any field being used in datapackage wizard which is different for eml-2.0.0 and eml-2.0.1 documents.

4 is what is left to do. Specifically, dateTimeDomain is optional in one schema and not optional in another. Hence that should be handled accordingly in data import wizard screens. This problem is mentioned in bug# 2162 with a little more description. Hence fix for this bug will fix that bug too.

#2 - 02/10/2006 03:31 PM - P. Anderson

This was waiting on the eml-2.0.1 prompt bug which is now closed.
