Description

Sometimes when navigating thru the workflow components tree (no search has been performed), and you double click on a folder to display a sub-directory, the tree collapses back to the top directory only, regardless of what was displayed before performing the double clicking operation. This happened when double clicking on the Image Manipulation folder.

Additionally, in some instances where the "+" is displayed, double clicking on that folder to display the sub directory contents removes the "+" sign, changes the folder icon to open but no sub-directory contents are displayed. (This happened sub directories of the pre-configured directory).

History

i think this may be fixed with the new rendering scheme - was possibly linked to re-painting the icons. When we switch to batik rendering, the actor icons in the library will all be raster thumbnails, and we may be able to close this bug then, since i haven't seen this behavior any more in my testing

#2 - 02/16/2006 12:51 PM - Matthew Brooke

closing - since it looks liek this is now working OK. reopen if you have issues
