Description

we need to get the nightly build system working again. mainly, we need to be able to test workflows and actors. the idea is to try to use Maven to run ptexecute on workflows and test the outputs. We can also use maven to test the code base and unit tests, although we've decided that this isn't necessarily needed right now.

History

#1 - 02/14/2005 01:19 PM - Chad Berkley

I have implemented a shell script based nightly build system that checks out both ptll and kepler, compiles both of them then attempts to run the kepler junit tests as well as a set of workflows (using ptexecute) listed in lib/test-workflows.lst. This system is now running on ecoinfo under my crontab.
