Need to cache the db schema.
Still need to decide within the GEON project what to do with Web services components.
Modify output ports to handle different data types (currently not a priority within the GEON project).

At least some GEON data is now accessible. Need to refactor for the new changes to the EcoGrid web service interfaces as those are made.

since efrat is on leave, i don't think this is going to make it in so i'm moving it to post 1.0.0.
