

Kepler - Bug #1914

Implement the 'most recently used' concept for workflows and actors

Some software presents a list of 'recently opened' documents. That list is added to (usually the File menu) so that it is easy to reopen a document. Keeping a list of the last 'n' workflows opened and displaying in a menu would make it easier to open those workflows again (n ~ 10?).

Perhaps this concept could also be extended to most recently used actors, so they would not have to be located again when Kepler was reopened.
