

Kepler - Bug #1917

Design and implement workflow semantic type check.

01/25/2005 10:57 AM - Shawn Bowers

Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	1917		

Description

Design and implement a feature similar to the Kepler type-system check (which occurs after a workflow is executed), but for semantic annotations.

The semantic type-check should be a component (api) that can be called by Kepler. Need a mechanism to report (through an interface) the semantic problems of a workflow (if any exist), and possibly a mechanism to suggest ways to correct the problems (a la the unit type system).

History

#1 - 11/02/2005 01:43 PM - Matt Jones

Possibly complete except for UI redesign issues. Check with bowers and test. Create a new bug for the UI redesign to be handled by brooke.

#2 - 03/27/2013 02:18 PM - Redmine Admin
