Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	1923		

Description

Develop some guidelines for what makes an ontology useful for specific SMS applications so that the KR group can develop appropriate ontologies.

Pick a few actors that could be useful to us and use those to create the ontologies used to annotate ports, rather than from first principals. In particular, use Eco Niche Modeling example and Biodiversity Analysis example from SEEK.

Determine how to deal with actors that use files for passing data rather than passing the data itself.

History

#1 - 11/02/2005 01:54 PM - Matt Jones

Madin hired in postdoc KR position to lead the charge on this ontology development. Aim for at least an initial set of ontologies for the SEEK case studies (ENM and biodiv) by the alpha8 release. To be refined during ensuing months before the 1.0.0 release.
