#### Description

Build "customization dialog" (see whiteboard photo in cvs: jalama/docs/dev/Sep2004mtg-whiteboard/configure\_entry\_form\_03.jpg) that is used to customize some aspects of the form generated by the form generator.

Customizable aspects include field visibility, default value, validation required, location etc. Dialog basically amends Drools rules before ui generation takes place

#### History

##### #1 - 02/01/2005 07:52 PM - Matthew Brooke

Another customizable aspect might be "collapsed on start" for widgets that hold optional and infrequently-completed values (like epiphyte and canopy in pisco app) - see Bug [#1936](#)

##### #2 - 02/01/2005 08:17 PM - Matthew Brooke

To expand on the "Default Value" setting: this could include:

- 1) a timestamp (already implemented in XBL)
- 2) auto-increment field (already implemented in XBL, but needs additional functionality, such as starting at user-defined values, and counting in user-defined direction - like in reverse at first, then forwards after tide goes out, for example, depending on field conditions) - see Bug [#1938](#)
- 3) Could be set to echo the value entered in the previous record; currently, fields do automatically keep prev record's values, but this should be configurable by the admin: keeping same values may be appropriate for "metadata"-type attributes that aren't being collected (eg site, date, etc), but not for data-type values (species found etc)

##### #3 - 08/26/2005 11:36 AM - Matthew Brooke

end of grant cleanup. Postponing

##### #4 - 03/27/2013 02:18 PM - Redmine Admin

Original Bugzilla ID was 1930
