Bugzilla-Id:	1931		

<b>Description</b>
Support multiple tables
Three Cases
A -
1) Lookup tables (follow the EML references to get enumerated values out of a table). This is probably just a case of writing rules to do it - should be possible without any architectural changes
2) Normalized data - foreign key constraints between tables: Context versus measurements (e.g., site table versus plot measurements table)
3) Orthogonal tables - no foreign key constraints - just need to generate mutiple unrelated UIs into individual XUL forms (currently, all tables appear in one form)

History

#1 - 08/26/2005 11:36 AM - Matthew Brooke

end of grant cleanup. Postponing
