Description

Implement Overridable Validation in XBL Datatable Widget - currently tells user something's not filled in, and they can't proceed to next record. However, at the form-designer's discretion (see Bug #1930), this should be overridable, although overriding should be ergonomically difficult to prevent abuse (eg popup saying you really shouldn't - are you sure? etc)

Possibly the form designer should be able to designate fields that are not overridable (again, see Bug #1930)

DEFAULT BEHAVIOR:

(Moving the following here from Bug #1627:)

2) Also Look at the eml-constraint for each attribute - as default, only make field validate as "required" if eml-constraint is "not null" (ie set minoccurs=1 - if it's not required, make minoccurs=0). This would be overridable by the form-designer, as described above
