Description

auto-increment field is already implemented in XBL, but currently has admin-set start, end and increment values.

Needs additional functionality, editable by user in field to reflect field conditions, such as starting at user-defined values, and counting in user-defined direction. For example, pisco collections depend on tides, so collection might start at the end of each transect and work backwards to halfdway, to beat the tide, then remaining measuerments would start at beginnign of each transect and work up to halfway, after the tide has come in and covered the already-measured parts.

first pass - show toggle button to allow user in field to switch between increment and decrement

#3 - 07/14/2005 03:38 PM - Matthew Brooke

added toggle button to allow user in field to switch between increment and decrement. Also allow user to type in an arbitrary starting value, and increment will count from there
