Description

Hi,

This has to do more with Metacat..

I have a fatal error when uploading metadata (and data) into the server. It says:

```
fatal error sending binary data to metacat: Illegal character(s) in message
header value: multipart/form-data;
boundary=-----ieoau.-.-+2_8_8.3-dskdfJwSJKI234324jfLdsjfdAuoqi----
```

I Imported a table from a spreadsheet (a CSV -- DOS format) saved using MS Excel. Morpho was able to "see" the headers and table well. Imported OK, and saved locally just fine. Reopened the file, etc. BUT Metacat rejects the file with the above mentioned error.

Thanks! Inigo San Gil
