Target version:	3.X.Y		**Spent time:**	0.00 hour
Bugzilla-Id:	2005			

Description

Annotation actors can be added to an overall workflow but cannot be associated
with specific actors. Only the actor 'name' moves with the actor; we need
annotations that can be tied to specific actors which move with the actor when
the actor is dragged across the screen.

History

#1 - 03/11/2005 12:36 PM - Laura Downey

this should also be done visually, meaning that if someone annotates an actor
with some text to be displayed that the text is linked with the actor and if
the actor is moved around the text moves with it.
