Matt/Dan -

I think this should be moved up in priority - the ability to document data is greatly hindered by not having this capability - I don't think it should be considered an enhancement.

Enable the Cut/Copy/Paste menus when their functionality is available. The editor makes these functions available, but because the menus are greyed out this is not at all obvious to users. Need to actively manage the enabled/disabled state of these menus to show when users can use them and when they can't.

#3 - 10/07/2002 01:42 PM - Dan Higgins

Cut/Copy/Paste menus are now enabled/disabled properly in the new DataPackage view. Actually, the only items that can currently be Cut/Copy/Pasted in this view are the data cell in the data table. At least one cell should always be selected, so Cut/Copy should always be enabled in this window.

Paste should be enabled whenever there is text data in the clipboard. Code has been added to DataPackagePlugin so that whenever the DataPackage window is 'activated' the clipboard is checked to see if it contains text (perhaps copied from Excel, etc.) If it does, the Paste menu is enable; if not, disabled. Cut and Copy commands within the window also enable the Paste menu.

It appears that a general purpose Cut/Copy/Paste handler would require that a CaretListener be added to all TextComponents. Thus, whenever any part of a text string was selected, the Cut/Copy/Paste menus could be appropriately handled. This is thought to require a substantial code change, so that it is being postponed to Target Milestone 1.3
