

Kepler - Bug #2056

Port labels appear 'twice' when DataSource actor added

04/04/2005 01:47 PM - Dan Higgins

Status:	In Progress	Start date:	04/04/2005
Priority:	Normal	Due date:	
Assignee:	Matthew Brooke	% Done:	0%
Category:	interface	Estimated time:	0.00 hour
Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	2056		

Description

Put any actor on a blank graph page (say, the SequenceToArray actor) Configure the ports to show port names(e.g. 'input' and 'output'). The display of the port names is OK. Now search for some EMLDataSource (say 'Datos') and drag a result to the graph display. When the DataSource output ports appear, the name labels then appear twice on the initial icon! This 'double label effect remains even when the DataSource actor is removed!

History

#1 - 11/02/2005 01:21 PM - Matt Jones

Seems to be fixed. Test and close the bug if no sign of it.

#2 - 11/03/2005 12:04 PM - Dan Higgins

As of 11/3/2005, this problem still occurs for me on a windows OS

#3 - 02/13/2006 02:47 PM - Matthew Brooke

Found this in passing - posting here for later -

in the javadoc for -
org.kepler.objectmanager.data.DataSourceInstanceController
(extends ActorInstanceController):

- NOTE: There should be only one instance of this class associated with a given * GraphController. This is because this controller listens for changes to the * graph and re-renders the ports of any actor instance in the graph when the * graph changes. If there is more than one instance, this rendering will be * done twice, * * * **which can result in bugs like port labels appearing twice** *.

(my emphasis added)

#4 - 04/17/2006 04:14 PM - Matthew Brooke

moved to 1.0, per conf call 17Apr06

#5 - 04/17/2006 04:15 PM - Matthew Brooke

ote - also happens on workflows without EML datasources

#6 - 03/27/2013 02:19 PM - Redmine Admin

Original Bugzilla ID was 2056
