Description			
When user tried to search "species" and get 5 results, but the number in the bottom show is 6. Then search "datos" and get 1 result, but the label in the bottom shows 7.			

History

In QuickSearchAction class, new code was added to set variable - number of hits, to 0 after a search.

There is another reason that the label doesn't match the real hits:

If there is a dot in the result record title, when user use the result record which the title contains a dot to create a ptolemy named object, it will cause a error and the result record couldn't be shown in the table panel. But the number of hits includes the record. So the label of hits number doesn't match the real hits in dataset panel. I added a function to replace the dot by dash, then it works.
