Description

I created a dp, entering only the required info in the wizard. Then I went to the tree editor and entered info in the 'methods' module in these fields: methodStep/description, methodStep/software/title, methodStep/software/creator, methodStep/software/implementation, and methodStep/software/version. In methodStep/software/creator, I only input info in the "individualname" field. I clicked OK in the tree editor and got the message "The saved document is not valid EML2...". I saved the dp and parsed it on <http://knb.ecoinformatics.org/emlparser/parse> and got this message:

XML-Schema Errors Found

The following errors were found:

cvc-complex-type.2.3: Element 'individualName' must have no character [children], because the types content type is element-only.

When I looked at the dp, I noticed that there was no info under "Individual:" (under Methods Info/Software/Author(s)) and "Distribution" (under Methods Info/Software/Implementation Info) even though I had input some info in these fields in the tree editor.

When I deleted the "individualName" field in the tree editor and provided info for the "organizationName" field, and clicked on OK, I got the invalid EML2 message again. When I parsed the dp, the error message was related to the distribution field this time:

XML-Schema Errors Found

The following errors were found:

cvc-complex-type.2.3: Element 'distribution' must have no character [children], because the types content type is element-only.

I also got the problem mentioned above about the 'individualName' field when using the 'relatedProject' field (in the 'project' module).

History

#1 - 06/22/2005 03:19 PM - Saurabh Garg

The cause of this bug is the limitation in tree editor to show tags only upto a certain level. Hence in the tree editor, under methodStep/software/creator only "individualName" field is shown. What should be shown is individualName/surName
