

## Morpho - Bug #2071

### Tree editor creates <ANY></ANY> tags after <additionalMetadata>

#### Description

I opened a dp that was saved locally and then opened the tree editor. I clicked on the "Show All" button and made changes in the 'creator' and 'contact' modules. I clicked on the "trim" button and then clicked on OK to exit the editor. I got the message "The saved document is not valid EML2...". When I parsed the dp on <http://knb.ecoinformatics.org/emlparser/parse>, I got this error message:

cvc-complex-type.2.4.a: Invalid content starting with element 'unitList'. The content must match '((("":describes){0-UNBOUNDED},{WC[##any]))'.

Looking at the EML file showed that <ANY> </ANY> tags had been inserted after the first <additionalMetadata> tag.

Clicking on the "Show All" button seems to trigger this, because previously, I made changes in the 'creator' and 'contact' modules without clicking on the "Show All" button and didn't encounter any problem.
