Bugzilla-Id:	208		
Description Need a new data package componenet from Morpho. This component represents a resource (in the EML sense), and most importantly, a "dataset resource"). Thus, it has mechanisms for storing all of the state info regarding a dataset, can access the client-framework to read/write parts of the dataset locally and to the metacat, and has a easy-to-understand mechanism for viewing a dataset in a window (which it should register with the framework). This should be implemented as a Morpho plugin, so it needs to implement all of the plugin interface methods. Chad is taking the lead on this, with assistance from Dan.
