Bugzilla-Id:	2096		

Description

Let's say you have a data package that contains a data table which in turn contains several attributes. In the tree editor, when you click "Show all", nine elements of the attribute module (dataTable/attributeList) appear for the first attribute of the table (attributeName, attributeLabel, attributeDefinition, storageType, measurementScale, missingValueCode, accuracy, coverage, method), but only four elements appear for the other attributes (attributeName, attributeLabel, attributeDefinition, measurementScale). All elements should appear for all attributes.

When there are several tables in the data package, only the first data table displays the nine elements for the first attribute; the other tables display only the four elements mentioned above for all attributes.

History

This is probably not a template bug, rather something in how repeated elements are handled.

#2 - 09/26/2005 01:11 PM - P. Anderson

Sid and I think we have fixed the bug but want further testing to happen before closing.

#3 - 09/28/2005 10:24 AM - Will Tyburczy

Show all seems to be showing all elements for all attributes now
