Description			
Bug reported by Kristin Vanderbilt:			
I'm trying to enter a point location for geographic coverage using Morpho. When I type 106.6914 into the longitude field, Morpho changes the number to 106.5314. I've tried doing this before and have had the same problem. How do I enter coordinates and not have Morpho change what I entered?			
Thanks, Kristin

The code earlier changed the value of coordinated entered if value of east coordinate was same as value of west coordinate - this was done so that a box can be displayed when Box Tool was selected.
But the code was executed irrespective of whether Box or Point tool was selected.
Fixed it so value is changed only when box tool is selected.
