Description

Add a simple annotation dialog for now so users can choose classes from existing ontology to annotate actors, ports etc. Provide access to simple definitions of a class and also related classes to a specific class.

With this simple dialog, users will not be able to edit ontologies. That will come later.

This annotation dialog should be accessible from various places within the UI.

(later, we will experiment with embedding Growl for use as the annotation tool but Growl needs to be expanded to include other features such as providing various canned simplified views of the ontology, adding a goole-like search within growl so users can search annotation properties, concept names etc, and features so that users can configure multiple views on an ontology, and arrange multiple view in visual heirarchies)

[decision from May 2005 Estes Park mtg]

History

#1 - 06/10/2005 01:26 PM - Shawn Bowers

This now works in kepler. Also added a "sibling" viewer to the dialog.

#2 - 03/27/2013 02:19 PM - Redmine Admin

Original Bugzilla ID was 2115
