EML - Bug #2173

Separating measurements and units into separate attributes

08/19/2005 03:12 PM - Will Tyburczy

Status: New
Priority: Normal
Assignee: Matt Jones
Category: eml - general bugs
Target version: Unspecified
Bugzilla-Id: 2173

Description
Many datasets seem to have columns in which the units are not consistent (eg. mixing hectares and acres, or parts per thousand and parts per million). There should be some way to have the units for each entry defined in a second column so that the actual numerical value and the measurement unit reside is separate columns. Currently there seems to be no syntax for EML to handle this situation.
