Description

The Metacat spatial option(s) should be easily included in any skin, so that
individuals and organizations may easily customize their sites.

History

#1 - 08/31/2006 06:34 PM - Matthew Perry

We'll likely want to have a few example templates, each self-contained in a single directory. To integrate it with any given skin, copy the spatial template from the style/common/spatial_templates directory into the style/skins/___/ directory and include the map in a div or iframe from the main page.

#2 - 09/11/2006 02:27 PM - Matthew Perry

Copying the template from the common dir to the skins directory is a viable option so we'll go with that for now.
