Bugzilla-Id:	2211		

Description

We need to automatically insert pubDate on registry submission. The 'pubDate' field represents the date that the resource was published. The format should be represented as: CCYY, which represents a 4 digit year, or as CCYY-MM-DD, which denotes the full year, month, and day. Note that month and day are optional components. Formats must conform to ISO 8601

Updated and new version of data packages that have been submitted to the registry will have a new pubDate.

IRQ conversation, " yeah, an updated document is really a new version with a new date the (modified) resource was published $so it should proabbly be updated$ the original revision will still have the original pubDate <math>so nothing is lost"

Note: This will be used for citations and will be used with citation information in stylesheets along with the lsid on the ESA stylesheet.

History

#1 - 09/30/2005 05:30 PM - Saurabh Garg

The code has been added to register-dataset.cgi.

The bug can be closed after testing.

#2 - 10/04/2005 11:46 AM - Saurabh Garg

pubDate is included in the eml document generated. Hence closing the bug.
