Target version:	Beta1	Spent time:	0.00 hour
Bugzilla-Id:	224		

Description

When data packages are saved, they should automatically have a default ACL that specifies who can have read and write access to the files. By default, Morpho should send an ACL for all of the components with RW access for the submitter and for all of the originators, but nobody else. Morpho should search the ldap server for the originators to determine the appropriate username and authSystem for the originator (this might be part of the data entry process for entering users as originators).

History

#1 - 07/12/2001 05:57 PM - Matt Jones

Reassigning to higgins to try and make the ESA deadline.

#2 - 07/23/2001 09:55 AM - Dan Higgins

Default ACL is now automatically generated which gives submitter 'all' permissions and 'public' set as indicated by check box. EML access doc is added to package (by means of triple added to triples container)

#3 - 07/23/2001 12:32 PM - Dan Higgins

changes added to insert a default ACL document when datapackage is created

#4 - 03/27/2013 02:13 PM - Redmine Admin

Original Bugzilla ID was 224
