Description

This is a strange one!

How to observe the problem:

1) Open the GARP_Single_Species_BestRuleSet.xml workflow ([#19](#) in ENM_Workflows.html page)

2) Look inside the 'Iterate ENM Calculation' composite

3) Look inside the 'V - Calculate Omission/Commission' composite in the screen opened in 2)

4) Inside the 'Calculate Omission/Commission' window, find the Expression actor which contains "DataDirectory+"/RuleSet"+cnt+".xml". Right click on the right hand corner of this actor and a popup menu is displayed as expected.

However, if you right-click on the left corner, a NullPointerException occurs in the AnnotatedPTree.notifyComponentDrop object!

It looks like none of the actors in the lower left of the screen are responding properly to right click events. (In fact, the errors look like it thinks the events are happening in the actor tree rather than the graph pane.)

History

#1 - 02/28/2006 08:15 PM - Matthew Brooke

tried under winXP with the new SVG icons (Batik rendering), and this looks like it's no longer an issue

#2 - 03/27/2013 02:19 PM - Redmine Admin
