- Bug 2107 has been marked as a duplicate of this bug. ***

#2 - 02/28/2006 08:35 PM - Matthew Brooke

text transferred from Bug 2107:

add advance search capability for data - start with curent Morpho advanced search that includes subject, taxonomic, spatial and temporal categories. Include "text" and "concept" checkboxes in advanced search. Also include mechanism for summarizing the query that is being built.

[decision from May 2005 Estes Park mtg]

I propose to take over this old bug -- REAP requires an Advanced Search dialog that allows a user to select a region of a map. I'm not sure the exact overlap of our needs with the original intention of this bug, but it's close. The original page referred to has moved here:
<https://kepler-project.org/developers/incubation/GUI/archive/search-dialogs/?searchterm=search%20dialog>

It's not yet been decided who will work on this. James has posted his mockups here:
<http://reap.ecoinformatics.org/Wiki.jsp?page=SearchingUIMockUps>
