Description

When creating the method step in the ingestion wizard - you enter a title and description - this creates a section, title, and paragraph. But there is a paragraph required after methodStep that doesn't get filled in. Then if you try to edit that empty field can't be deleted or trimmed.

History

#1 - 11/17/2005 01:12 PM - James Brunt

Some additional investigation - the Morpho editor is trying to enforce a requirement of a <para> as part of the <methodStep> <description> where as the text type is supposed to be a choice of a <para> or a <section>. The wizard creates a <section> thus the conflict is between the wizard and the editor - the editor not enforcing the schema properly.

I think this would be a good one to fix because it looks like something that people would commonly run into. I ran into it today

#3 - 06/08/2006 09:52 AM - Will Tyburczy

might just be me, but a true fix to this bug would probably eliminate #1656 as well.

#4 - 01/20/2010 02:57 PM - ben leinfelder

I used the wizard to create a methods element. This creates a description/section/para element. THen using the tree editor I added a sibling para element to section and it validated when closing the tree editor.
