

VegBank - Bug #2283

Email to user does NOT work after load: using Hyperion!

11/18/2005 10:14 AM - Michael Lee

Status:	Resolved	Start date:	11/18/2005
Priority:	Normal	Due date:	
Assignee:	Chad Berkley	% Done:	0%
Category:	userLoad	Estimated time:	0.00 hour
Target version:	1.1.0	Spent time:	0.00 hour
Bugzilla-Id:	2283		
Description			
After loading, I get no emails. Whatever is slowing down the system or causing errors needs to not prevent emails from being sent.			
Denorm and keywords goes slowly/not at all. Needs fixing for the rest of the system to function.

After XML is loaded, an email receipt needs to be sent that is a summary of what loaded and a link to more info about them (the dataset view of the dataset created when XML loads).

This email should be sent to the user (as is promised on: <http://vegbank.org/vegbank/DisplayUploadPlotAction.do> where users load XML), and also the dba (dba@vegbank.org) to let us know that plots have been added!

If the load fails, a different receipt should be sent letting the user know the XML load failed. Reasons why it failed would be useful to the dba

#2 - 04/06/2006 07:54 PM - Michael Lee

E-mailing user and admin probably doesn't work because it's using hyperion instead of mercury:

```
DEBUG XML.LoadTreeToDatabase: sending message to user
DEBUG utility.ServletUtility: Using this smtp server: hyperion.nceas.ucsb.edu
ERROR XML.LoadTreeToDatabase: problem sending dataload receipt via email:
javax.mail.SendFailedException: Sending failed;
nested exception is:
class javax.mail.MessagingException: Could not connect to SMTP host: hyperion.nceas.ucsb.edu, port: 25;
nested exception is:
java.net.ConnectException: Connection refused
```

changed to mail.nceas.ucsb.edu. the property can be changed in build.properties if installed outside nceas.
