Description

Wehn displaying EML documents in the ESA registry (and maybe others in the future), we will want to display the 'citation format' that was agreed upon for ESA at the top of the EML display page. This means modifying the EML stylesheets.

The citation display should be configurable to choose whether to display identifiers as metacat identifiers (the default) or as LSID identifiers (used for ESA skin for now). I can give pointers on how to do this.

The citation format to be displayed should be:

Robert SW, Hopkins R, and Marker PM. 2005. Distribution and abundance of mussels in the intertidal zone of Santa Barbara Channel from 2000 to 2004. ESA Data Registry urn:lsid:esa.org:esadata:104:1 (<http://data.esa.org>).

Lets boldface the title in the display and see how that works.

These fields should probably replace the existing top of the form where the identifier and title are displayed, and delete the "Data Set Description" heading as it doesn't add anything.

History

#1 - 01/19/2006 11:55 AM - Will Tyburczy

Changed the xsl sheets to optionally display lsid's. Additional parameters needed by the stylesheets are \$lsidauthority, \$registryurl, and \$registryname.

#2 - 01/20/2006 09:12 AM - Will Tyburczy

LSID support now implemented in metacat.

#3 - 03/27/2013 02:19 PM - Redmine Admin

Original Bugzilla ID was 2311
