

Kepler - Bug #2330

Saving a workflow doesn't add .xml or .moml extenders

01/12/2006 12:32 PM - Dan Higgins

Status:	Resolved	Start date:	01/12/2006
Priority:	Normal	Due date:

Target version:	1.0.0rc1	Spent time:	0.00 hour
Bugzilla-Id:	2330		
Description			
<p>When saving a workflow, if you just enter a file name without the '.xml' or '.moml' extender, the file is saved as typed. But when opening such a workflow, the text is displayed; i.e the moml is not parsed and displayed as a graph unless the extender is in the file name!</p> <p>This confused new users are recent training session.</p>			

History

#1 - 01/24/2006 02:28 PM - Chad Berkley

I modified PtlII ptolmy/actor/gui/TableauFrame code to put a .xml extension on the files when it save them. it only puts the extension on them if the user hasn't specified an extension and the "all files" filter is not chosen.

#2 - 01/26/2006 09:42 AM - Christopher Brooks

Hi Chad,

My concern is that adding the filter to TableauFrame is the wrong place, since TableauFrame is the base class that is used by other classes that are not .xml or .moml files.

For example, in Ptolemy, Do File -> New -> Text Editor

Type some text

Do File -> Save

Change the name to README

Save the file.

The file is saved as README.xml

This does not seem quite right, perhaps we can put the "Add the .xml" code somewhere lower in the class hierarchy? I'm reopening this bug pending a fix for this problem.

This bug seems like the bug in wordpad or notepad where you can't save a file without .txt being added automagically.

#3 - 02/13/2006 02:24 PM - Chad Berkley

Christopher fixed this in the ptii code (right christopher?)

#4 - 02/13/2006 03:27 PM - Christopher Brooks

Yep, I think I fixed this, but I neglected to close the bug pending testing by someone else.

I think it can stay closed.
