Description It is standard design practice to enable/disable menu and toolbar items as appropriate. Matthew mentioned this in bug 2246. I haven't suggested this as of yet because often it involves quite a bit of additional logic to the code. But Matthew's mention reminded me of it and it does deserve its own bug. Enabling/disabling menu/toolbar items is very useful to users in helping them understand what they can do in certain contexts and with certain objects, and it also helps decrease menu/toolbar complexity.
