Description

QueryDialog currently hard codes the "casesensitive" query option and does not allow the user to set and control many important options. Possibly add a new tab for these query options, which would read and write the results to the users profile. This includes: casesensitivity, local search toggle, metacat search toggle, and other relevant search options.

History

#1 - 07/12/2001 05:11 PM - Matt Jones

Changed milestone for a number of morpho features that will not be able to be completed by Beta 1 (ESA). Delaying these features to Beta 2.

#2 - 09/06/2001 02:32 PM - Matt Jones

Fixed. Query options are now handled under a new tab in the query dialog. There is also a "save defaults" button there that lets the user save the options as their "defaults", which is stored in thier profile. Casesensitive can be set there, as well as whether or not to include taxon synonyms in searches.
