Has duplicate Metacat - Bug #3146: Include FGDC metadata in KNB and NCEAS ski...		Resolved	02/13/2008

History

#1 - 02/24/2006 11:51 PM - Matt Jones

Initial support completed for the KNP skin in prep for the Kruger demo. BDP documents can again be inserted into metacat. The KNP query form and browse link now support the BDP returndoctype and returnfields, and the support for these fields was added to the DocumentIdQuery class to support the spatial queries too. The default resultset.xsl was modified to display the BDP returnfields in the appropriate columns of the result set.

Still need to:

- 1) Make changes to other skins. Really should factor out these returnfield and doctypes to a separate file that can be shared by all of the skins.
- 2) Redesign the NBII stylesheet to be consistent in style with the EML stylesheet displays.
- 3) Figure out how the new returnfields affect which fields should be indexed by default in the metacat.properties.

An additional note: Since FGDC (and all non-EML documents) do not contain access constraints, there needs to be an easy way for users to describe the access rules.

#3 - 07/25/2008 03:17 PM - ben leinfelder

while triaging for 1.9 release we determined that this has been resolved as of metacat 1.8.1 see bug 3146

- This bug has been marked as a duplicate of bug 3146 ***
