| Try searching actor tree for 'Doc' or 'DocViewer'. Tree just 'flashes' and returns to a single top level node. Seache for 'Docu' works!<br>(Observed on a Windows machine be Dan Higgins) |              |                        |            |

### History

#### #1 - 04/07/2006 02:54 PM - Matthew Brooke

This seems to be caused by DocViewer Parameter.

It appears in the tree with a "+" next to it, as if it is a folder rather than a leaf node. Clicking on the "+" briefly reveals a sub-level with the label "\_hideName", and then the tree resets, as described above.

Searching for "doc" also causes this behavior, since the search display tries to show the \_hideName subnode. Search for "docu" doesn't have this problem, because

If you then repeat either the clicks or the "doc" search a second time, the "\_hideName" subnode shows up and the tree stays open.

See also Bug [#2382](#), which has morphed into a the same thing as this. I'm requesting that this bug be retained for this specific issue, and Bug [#2382](#) be re-diverted to address it's original purpose, which is a different issue from this one.

#### #2 - 04/11/2006 03:02 PM - Matthew Brooke

made the \_hideName attribute self-closing tag. previously, it surrounded the icon description, which i think was an error
