<b>Description</b>			
<p>Some dialogs need to be shown without menubars (eg Welcome Window, Query Builder dialog). We therefore need centralized way to remove the menubar, so the code for these dialogs can do so without havign to worry too much about threading issues etc (since the Kepler menus are not added until an observing thread sees that the ptii menus have been completely rendered).</p> <p>Notes from IRC as a reminder to me: ===== Mar 27 16:32:30 mbHome nandita Mar 27 16:33:15 mbHome all you need to do is call the JFrame method "setJMenuBar()" and pass it null as the JMenuBar value Mar 27 16:33:41 mbHome the only issue is getting this to happen at the right time, since the menu bar is added in a separate thread Mar 27 16:34:09 nandita ok Mar 27 16:34:36 mbHome see src/exp/ptolemy/vergil/basic/MenuMapper.java Mar 27 16:34:49 mbHome the public void run() method Mar 27 16:35:17 mbHome waits for a frame to display before it removes the ptii menubar and adds the kepler menubar instead Mar 27 16:35:32 mbHome that code will be similar to what you want to do, i think =====</p>

There is already a way to do this - all you need to do is call hideMenuBar() (which is a public method in ptolemy.gui.Top - of which the frame you're workign in should be a descendent). This call would typically be in the constructor of your frame class
