#### Description

The workflow "GARP\_SingleSpecies\_BestRuleSet.xml" ([#19](#) in the GARP example list) will crash if the numIterations parameter is given too small of a value. Actually, the problem is the relative values of several parameters. There is another parameter called 'omissionFraction' (set to 0.1 by default). That parameter times the numIterations must be greater than 'numBestRulesets' (=3 by default) or GARP tries to run with a nil ruleset (which crashes everything).

#### History

##### #1 - 04/07/2006 01:53 PM - Dan Higgins

Revised the RScript so that a nil ruleset is not sent to the GARP actor. This fix added some parameter checks to the script.
