

VegBank - Bug #2404

Evaluate: Let users define bounding box with Google Maps, then show plots in that area

04/06/2006 10:28 PM - Michael Lee

Status:	New	Start date:	04/06/2006
Priority:	Normal	Due date:

Target version:	1.2.0	Spent time:	0.00 hour
Bugzilla-Id:	2404		
Description <ul style="list-style-type: none">would be cool to have Ajax function that calculates the number of plots within the map, and displays it every time the map resizes or moves. * if too many plots (>250?), could break map into sections and show # of plots in each. User could say, no please still map them all anyway. * could have different icon strategies. Dataset is simplest, and users could tag plots however into whatever datasets they like. * Perhaps tell them about print-screen or alternate ways of capturing the map to save it. * Share map with others by making public the dataset and details about the map (boundaries and zoom)			
Related issues: Is duplicate of VegBank - Bug #2424: new feature: Create "find plots by area"... <div>Resolved04/24/2006</div>

This is done. Converting this bug into an evaluation bug of the completed form.

you can link to it from the front page, or from here:

I just added a few features to this:

<http://aldo.vegbank.org/vegbank/views/plot-query-bymap.jsp>

but unfortunately it broke the tool in IE.

#4 - 06/23/2006 11:01 AM - Michael Lee

now working in IE!

#5 - 09/11/2006 04:23 PM - Michael Lee

This now works with both IE and Firefox.
