Description

Hi Laura,
I'm assigning this bug to you because you will either know how to fix it
or know who to assign this one to. In
http://bugzilla.ecoinformatics.org/show_bug.cgi?id=2343
you pointed out that we need a 25x25 Kepler
icon. I hacked one up at
configs/ptolemy/configs/kepler/KeplerSmallIcon.gif
but it is ugly.

BTW - The configuration sets _applicationIcon the a FileParameter.
TableauFrame reads the _applicatonIcon parameter of
the configuration.

_Christopher

History

#1 - 04/20/2006 05:07 PM - Matthew Brooke

Created a new small 25 x 25 icon for title bar as a stop-gap. Laura and I originally talked about using a solid teal box with a white K, but when viewed agains the windows and linux title bars, the teal and the blue looked pretty grim together. I modeled this icon after laura's splash-screen design - with the same colors. It looks better against the title bars, but i still don't love it; however, it's better than what we had, and can be changed in future when we have more time

#2 - 04/21/2006 05:43 PM - Christopher Brooks

I'm closing this because we have the icon and it shows up in the
different windows.
