<b>Description</b>			
The query result screen needs to be able to handle a refresh command from other plugins. This will allow the package editor/wizard (or other future plugins) to call a refresh when it makes changes to the document base.			

### History

#### #1 - 10/24/2001 12:24 AM - Matt Jones

FIXED. Before, when some editing and metadata addition operations were performed, the query results window did not properly refresh, so the user was left with a reference to an out-of-date package. A new ServiceProvider implements the new QueryRefreshInterface which allows any class that is making modifications to a package to notify the "My Data" window that it should refresh. Had to patch the PackageWizard to catch creation of new packages, and the AddMetadataWizard to catch the addition of new metadata documents, and the various "editingCompleted" method calls in order to catch changes to existing metadata documents. The QueryPlugin implements this service.
