Bugzilla-Id:	2440		

Description

On a Windows XP using kepler aplha-9, java 1.5.0_04:

When a workflow is saved and only the file name is given (no extension provided) then the contents get written to a file without any extension and the main kepler window is replaced with a window which displays the source code.

Would prefer a default extension is none is supplied.

History

#1 - 05/26/2006 09:54 AM - Matthew Brooke

This should be relatively straightforward to do, once the code is found that pops up the JFileChooser (probably in PTII?)

#2 - 04/12/2007 02:50 PM - Dan Higgins

This problem is apparently fixed by newer version of Ptolemy. If no extension is given, the default '.xml' is automatically added
