Description			
In current versions of Kepler, the 'Customize Name' popup menu is missing, although it does appear in the Beta2 release and it is in the menu customization file! The problem may be related to changes in Ptolemy where 'Customize' is now a hierarchial menu.			

History

#1 - 10/02/2006 04:15 PM - Dan Higgins

Ptolemy changed the action used for this menu and changed it to a hierarchial menu. I am not sure exactly why it would not appear, but when I tried referencing the Action class directly by name in the menuMapping file, I discovered that the mapping requires an Action with a specific type of Constructor. I modified the new Ptolemy Action for Renaming to match the requirements. This fixed the problem.
