Description

We need to have a version of the database that contains only woody species that will be used for levels 1-2 sampling. This is needed by about Oct 4. This will reduce the size of the database as well as make entry faster as there will be fewer ambiguous cases with 2 letters genus + 2 letter species.

History

#1 - 10/03/2006 03:08 PM - Michael Lee

I have gone through the list and come up with a first cut, Bob and Forbes are confirming what I have done and dealing with problematic species.

#2 - 10/11/2006 03:55 PM - Michael Lee

Bob provided the woody values, Michael has implemented in version 2.0.2

Now is smart enough to show only woody stems for stem entry forms and all species for cover
